My name is UMUBYEYI Marie Merci.

UMMPortifolio: UI and UX design document

Item	Detail
App name	UMMPortifolio
Student	UMUBYEYI Marie Merci
Registration number	2638496
Verification code	MOB-A2-8496
Android package	com.Marie1.UMMPortifolio
Course	SWE 3409 Mobile Application Development, INES-Ruhengeri

Concept

A recruiter asks for an introduction through a phone app instead of a paper CV. The app opens on my name, shows who I am in two minutes and works offline in a meeting room with no network.

Intended recruiter

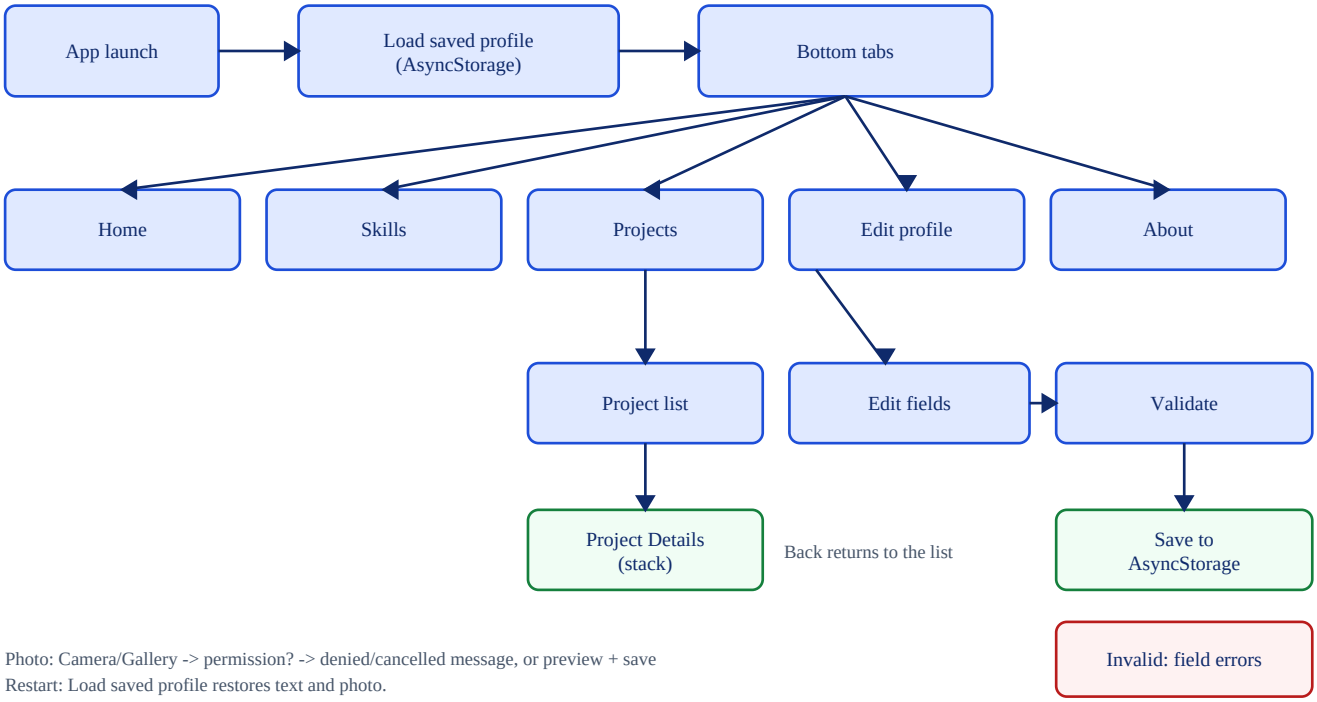
A technical recruiter or innovation-challenge judge in Rwanda, probably holding a mid-range Android phone, with a few minutes and no time for setup.

Visual direction

Clean and trustworthy: one strong blue for headers and actions, white cards on a very light blue background, large rounded buttons, short readable text, and a green or red state for success or errors.

Identity rule: the first sentence on Home, in README.md and on this page reads exactly: My name is UMUBYEYI Marie Merci.

User flow and information architecture



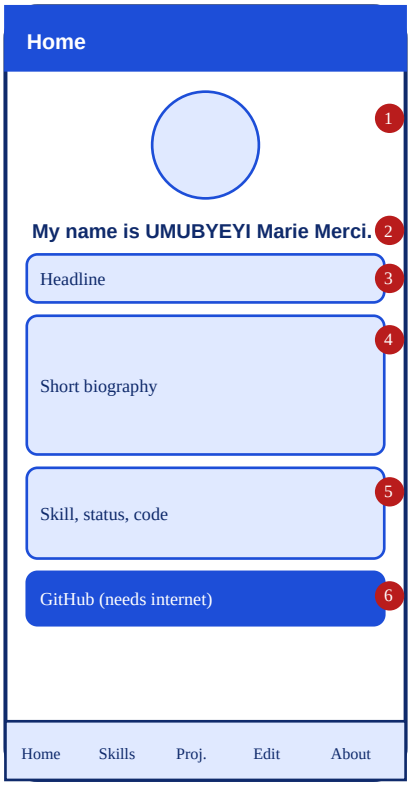
Structure

Five bottom tabs hold the major sections (Home, Skills, Projects, Edit profile, About). The Projects tab contains a stack: Project list, then Project Details. Android Back from Project Details returns to the list, and switching tabs keeps the session state (typed text stays in the editor).

Saved-state flow

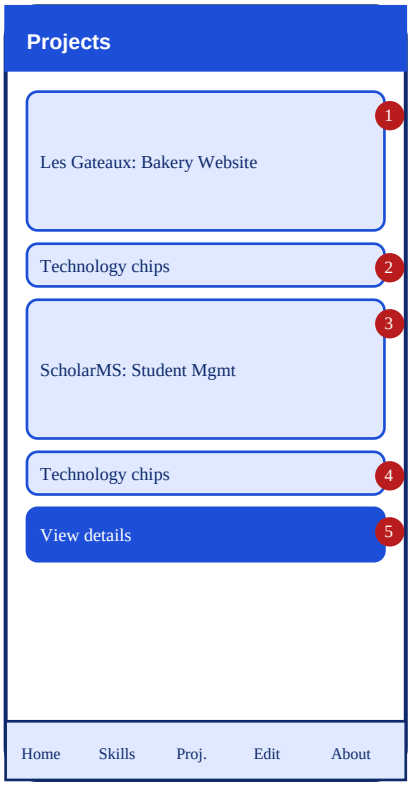
On launch the app reads the saved profile from AsyncStorage. Saving writes the validated fields; choosing, replacing or removing a photo writes the local image reference. After closing and reopening the app, the same data is restored. Reset deletes the saved profile.

Annotated wireframes (1/2)



1. Photo or initials avatar
2. Exact intro sentence
3. Editable headline
4. Editable biography
5. Primary skill, availability, verification code
6. Optional online link, clearly labelled

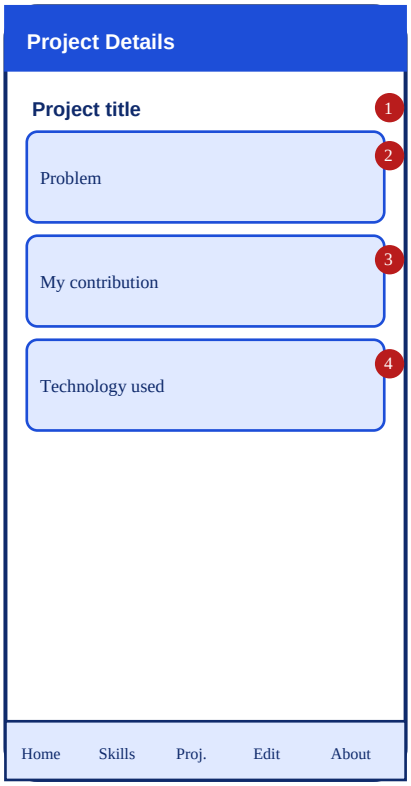
1. Section title
2. Java (Swing, JDBC) - Beginner
3. HTML & CSS - Beginner
4. JavaScript - Beginner
5. MySQL Database - Beginner
6. React Native (learning) - Beginner
7. Section title: Education
8. Education timeline (reusable component)



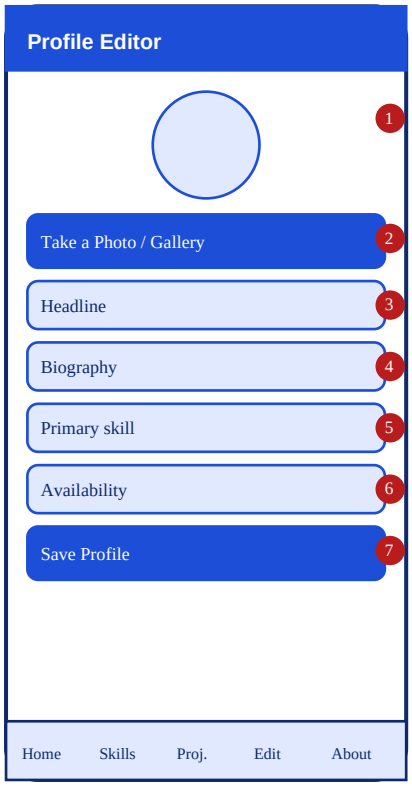
1. First project: Les Gateaux, Bakery Website. Card opens Project Details
2. Technology chips wrap
3. Second project: ScholarMS, Student Management System
4. Chips
5. Tap target at least 48 px

Empty state: if the project list is empty, an information banner reads "No projects yet."

Annotated wireframes (2/2)



1. Title from route parameter
2. Problem statement
3. Personal contribution
4. Technology chips; Back returns to the list



1. Photo preview
2. Take a Photo and Choose from Gallery; Remove Photo appears only when a photo exists
3. Headline (controlled input)
4. Biography (controlled, multiline)
5. Primary Skill (controlled input)
6. Availability (controlled input)
7. Save Profile (blue primary action)

1. Invalid headline
2. Headline must be at least 3 characters.
3. Invalid biography
4. Biography must be at least 20 characters.
5. Empty primary skill
6. Primary skill is required.
7. No availability chosen
8. Availability status is required.
9. Save is blocked until all fields are valid

Permission denied: a red banner explains how to allow the permission or use the other source.

Cancelled selection: a blue banner says the current photo was not changed.

Saved: a green banner confirms "Profile saved on this phone."

Visual and accessibility decisions

Topic	Decision	Reason
Colour	Primary blue #007AFF on white cards; background #f5f5f5; error text #d32f2f; success green #4CAF50	Strong contrast on white; blue suits a professional profile
Typography	System font, 24 px intro, 16 px body, 14 px minimum	Readable on a narrow phone without loading fonts (offline)
Spacing	16 px screen padding, 12 px card radius, 48 px minimum button height	Comfortable touch targets
Layout	Flexbox, wrapping rows, no fixed heights for text	Stays readable with large system text
Accessible labels	accessibilityLabel on buttons, fields, photo and avatar; header roles on titles	Works with TalkBack
Errors	Text message plus red border; not colour only; live region announcement	Clear for everyone
Large text	Tested with Android font size at the largest setting (see test log)	Required by the assignment

Implementation note: the final screens follow these wireframes, with the following justified changes:
• The 5 skills displayed are Java (Swing, JDBC), HTML & CSS, JavaScript, MySQL Database and React Native (learning), all at Beginner level.
• The 2 projects displayed are Les Gateaux (Bakery Website) and ScholarMS (Student Management System).
• Validation rules: headline min 3 characters, biography min 20 characters, primary skill required, availability required.
• Colours used: primary #007AFF, background #f5f5f5, error #d32f2f.
